Task 6: House Price Prediction

Objective:

Predict house prices using property features such as size, bedrooms, and location.

Dataset:

House Price Prediction Dataset (available on Kaggle)

Instructions:

● Perform preprocessing on features like square footage, number of bedrooms, and location.

● Train a regression model (Linear Regression or Gradient Boosting).

● Visualize predicted prices compared to actual prices.

● Evaluate with Mean Absolute Error (MAE) and RMSE.

Skills:

● Regression modeling

● Feature scaling and selection

● Model evaluation (MAE, RMSE)

● Real estate data understanding
